Histopathology of the Bladder, Prostate, and Testis

Instructor: Rebecca Thomas, MD (rebecca.thomas@jefferson.edu)

Block: Endocrine/Urology/Reproduction

Thread: Pathology

Conflict of Interest: Dr. Thomas has no conflicts of interest to disclose.

Textbooks

Robbins and Cotran: Pathologic Basis of Disease, 8th ed.—Chapter 21: The Lower Urinary Tract and Male Genital System

Rubin's Pathology: Mechanisms of Human Disease, 8th ed.—Chapter 23: The Lower Urinary Tract and Male Genital System

Learning Objectives

By exam time, you should be able to do the following:

1. Describe and identify the risk factors, gross features, and microscopic histology of urothelial carcinoma (transitional cell carcinoma), including contrasting the common growth patterns of this tumor.

2. Explain the pathogenesis of benign prostatic hyperplasia (BPH); describe and identify the clinical presentation, gross features, and microscopic histology of BPH.

3. Describe and identify the gross features and microscopic histology of prostate adenocarcinoma; discuss the use of the Gleason and grade group systems with respect to grading of prostate cancer.

4. Describe and identify the demographics, gross features, and microscopic histology of testicular germ cell tumors (testicular cancer), including the use of serum markers in its diagnosis.

5. Describe the major factors that affect the staging of urothelial carcinoma, prostate cancer, and testicular cancer.
