Case Vignettes: Pituitary, Thyroid, & Parathyroid

Instructor: Eric Shiffrin, MD (eric.shiffrin@jefferson.edu)

Block: Endo/Uro/Repro

Thread: Clinical Medicine

Conflict of interest: Dr. Shiffrin has no conflicts of interest to disclose.

Learning Objectives

By exam time, you should be able to do the following:

1. Summarize how to select and interpret laboratory and imaging tests to diagnose thyroid dysfunction.
2. Understand the management and treatment of central hypothyroidism and central hyperthyroidism.
3. Describe the clinical presentation, laboratory evaluation and diagnostic approach to identify and assess pituitary adenomas
4. Explain the treatment options and management of acromegaly, prolactinoma, and Cushing disease
5. Apply an algorithmic approach to evaluate hypercalcemia including analysis of clinical presentation, and interpretation of diagnostic tests
6. Summarize the potential sequela of untreated primary hyperparathyroidism
